

PyCPULimit

Juste un utilitaire GTK afin de lancer une commande via cpulimit

- permet de régler l'option `-limit` (taux de charge CPU accordée)
- permet de régler le nombre de coeur accordé au processus (détection automatique)

Installation

Depuis le git

```
$ git clone https://github.com/CyrilleBiot/pycpulimit-gtk.git
$ cd pycpulimit-gtk/source
$ ./pycpulimit.py
```

Depuis les paquets deb

```
$ wget
https://github.com/CyrilleBiot/pycpulimit-gtk/blob/main/pycpulimit-gtk_1.1.0
_all.deb
$ apt install pycpulimit-gtk_1.1.0_all.deb
```

(à adapter à la version du paquet)

Screenshot

The screenshot shows a Linux desktop environment. In the foreground, a window titled "SpinButton Demo" is open, displaying a slider set to 35% CPU usage and four toggle switches for CPU 1, 2, 3, and 4, all of which are turned on. Below the sliders is a "Lancer la commande" button and a red status bar that reads "WAITING DURANT PROCESS". In the background, a terminal window displays the output of the 'top' command. The 'shred' process is highlighted with a red box. The terminal also shows system statistics in the top right corner, including CPU usage at 14%, temperatures for C1-C4, and a load average of 1.15, 0.71, and 0.74.
