

PyCPULimit

Juste un utilitaire GTK afin de lancer une commande via cpulimit

- permet de régler l'option `-limit` (taux de charge CPU accordée)
- permet de régler le nombre de coeur accordé au processus (détection automatique)

Installation

Depuis le git

Dépendances requises

[download](#)

```
# apt install python3-gi cpulimit
```

Cloner le GIT

```
$ git clone https://github.com/CyrilleBiot/pycpulimit-gtk.git
$ cd pycpulimit-gtk/source
$ ./pycpulimit.py
```

Depuis les paquets deb

```
$ wget
https://github.com/CyrilleBiot/pycpulimit-gtk/blob/main/pycpulimit-gtk_1.1.0
_all.deb
$ apt install pycpulimit-gtk_1.1.0_all.deb
```

(à adapter à la version du paquet)

Screenshot

The screenshot shows a Linux desktop environment. On the left, a window titled 'SpinButton Demo' has a slider set to 35% CPU usage and four CPU selection buttons (CPU 1-4), with CPU 2, 3, and 4 selected. Below the buttons is a 'Lancer la commande' button and a red 'WAITING DURANT PROCESS' indicator. In the center, a terminal window displays a process list with columns for PID, Program, Arguments, CPU, User, and Memory. The first row, 'shred -n 30 -z -u /home/ragnarok/Téléchargements/debian-10', is highlighted with a red box. On the right, system monitoring data shows '15-6300U' at 800 Mhz, CPU usage at 14%, and temperatures for C1, C2, C3, and C4. A 'Load AVG' section shows values 1.15, 0.71, and 0.74.
